January 21, 2026

To the Hiring Manager,

My name is Maya Winland-Gaetz, and I am a third-year Electrical Engineering student and Canadian citizen seeking my first co-op term in as an Embedded Engineering Student at Reach Technologies Inc., available for 4 months. As a mature student, I returned to university to pursue my passion for electronic design, and I believe my qualifications would make me an ideal fit for this role.

My most recent co-op work experience at Ocean Networks Canada was an incredible opportunity to get my feet wet in several different areas, and furnish me with some skills that would help me excel at Reach. Much of my work at ONC involved designing internal applications to help the engineering team monitor and maintain automated testing and data-collection platforms, including live reporting of telemetry over Ethernet and Moxa NPort serial-over-WiFi systems. In addition, a more hardware-centric endeavour was producing a feasibility report for the P-ONE project's power distribution module. This involved conceiving and designing a stackable relay array in Altium Designer, conferring with colleagues on DC switching and heat mitigation strategies, and ensuring robustness and isolation to ensure the system could be deployed without servicing for at least 10 years.

I pride myself in being a quick study, and have been eager to apply myself in embedded systems in an industrial context. I joined the UVic Satellite Design Club as a highly active member in early 2024, contributing to our cubesat projects by designing a Telemetry, Tracking & Command module, as well as evaluation boards for transceiver and power amplifier ICs. I also spend much of my free time on electronic and amateur radio projects; I just picked up a hobbyist SDR the other day, with my current project being to communicate with weather balloons or, perhaps with a homemade Yagi antenna, NOAA satellites. I'm also taking it as an opportunity to learn more about embedded computing, by controlling it over SSH on a Raspberry Pi 3B.

I would be thrilled to have the opportunity to interview with you, and yet more thrilled still to be able to work at Reach Technologies Inc! While I might say my best assets are my strong work ethic and endless enthusiasm for new and interesting work, I also believe there is much I can bring to the table with my skills and experience.

If you are interested, I can be best reached over email, but I am also available via phone if that would work better for you. Thank you for taking the time to read my letter, and for your consideration.

I look forward to hearing from you!
Sincerely,

Maya Winland-Gaetz
