January 21, 2026

To the Hiring Manager,

My name is Maya Winland-Gaetz, and I am a third-year Electrical Engineering student and Canadian citizen seeking my first co-op term in as an Industrialization Test Equipment Co-op at Schneider Electric, available for 4 months. As a mature student, I returned to university to pursue my passion for electronic design, and I believe my qualifications would make me an ideal fit for this role.

My most recent co-op work experience at Ocean Networks Canada was an incredible opportunity to get my feet wet in several different areas, and furnish me with some skills that would help me excel at Schneider. Much of my work at ONC involved designing applications in Python to help the engineering team monitor and maintain automated testing and data-collection platforms, including live reporting of telemetry over Ethernet and Moxa NPort serial-over-WiFi systems. I pride myself in being a quick study, and am eager to learn more about control system design in an industry context. In addition, reverse-engineering the byte-by-byte SPI command structure of an Alcatel 1626LM fiber-optic node required me synthesize documentation with my own tests and intuition to build a process for setting and reading the tunable laser's frequency and output: skills I am sure would help me perform in this role.

Although my academic performance is very strong, my interest in electronics also extends to my extracurricular and personal time. I joined the UVic Satellite Design Club as a highly active member in early 2024, designing two evaluation boards for the TI CC1201 transceiver SoC and a matched power amplifier. I also spend much of my free time on personal electronics projects; I currently have a hobbyist software-defined radio kit in the mail, with the aim of communicating with NOAA satellites and downloading high-resolution satellite imagery of the Canadian Rockies.

I would be thrilled to have the opportunity to interview with you, and yet more thrilled still to be able to work at Schneider Electric! Although I left my previous career in environmental science, I still strongly believe in the values that led me to seek it in the first place: using sustainable technology to leave the world better and brighter. I believe there is much I can bring to the table, be it my existing skills in the field of electrical engineering, or my drive to add to them and learn more.

If you are interested, I can be best reached over email, but I am also available via phone if that would work better for you. Thank you for taking the time to read my letter, and for your consideration.

I look forward to hearing from you!
Sincerely,

Maya Winland-Gaetz
