January 18, 2026

To the Hiring Manager,

My name is Maya Winland-Gaetz, and I am a third-year Electrical Engineering student and Canadian citizen seeking my first co-op term in as the Electrical Engineering Co-op Student at Reliable Controls, available for 8 months. As a mature student, I returned to university to pursue my passion for electronic design, and I believe my qualifications would make me an ideal fit for this role.

My most recent co-op work experience at Ocean Networks Canada was an incredible opportunity to get my feet wet in several different areas, and demonstrate both my competencies and my willingness to develop beyond them. One of my proudest achievements was compiling a feasibility analysis for the P-ONE project concerning a power distribution module redesign. This involved designing a stackable relay array in Altium Designer, learning from colleagues on DC switching and heat mitigation strategies, and ensuring robustness and isolation to ensure the system could be deployed without servicing for at least 10 years. As an exciting coda to my time there, I exceeded expectations by reverse-engineering the byte-by-byte SPI command structure of an Alcatel 1626LM fiber-optic node one day after the task was assigned to me. I pride myself in being a quick study, and it was very gratifying to see it pay off in the delighted surprise of my supervisor.

Although my academic performance is very strong, my interest in electronics also extends to my extracurricular and personal time. I joined the UVic Satellite Design Club as a highly active member in early 2024, and have grown to be a highly valuable member, designing two evaluation boards for the TI CC1201 transceiver SoC and a matched power amplifier. I also spend much of my free time on personal electronics projects; I currently have a hobbyist software-defined radio kit in the mail, with the aim of communicating with NOAA satellites and downloading high-resolution satellite imagery of the Canadian Rockies.

I would be thrilled to have the opportunity to interview with you, and yet more thrilled still to be able to work at Reliable Controls! Although I left my previous career in environmental science, I still strongly believe in the values that led me to seek it in the first place: using sustainable technology to leave the world better and brighter. I believe there is much I can bring to the table, be it my existing skills in the field of electrical engineering, or my sheer enthusiasm to add to them and learn more.

If you are interested, I can be best reached over email, but I am also available via phone if that would work better for you. Thank you for taking the time to read my letter, and for your consideration.

I look forward to hearing from you!  
Sincerely,

Maya Winland-Gaetz
